

國立成功大學
113學年度碩士班招生考試試題

編 號：243

系 所：交通管理科學系

科 目：統計學

日 期：0202

節 次：第 2 節

備 註：不可使用計算機

* 考生請注意：本試題不可使用計算機。 請於答案卷(卡)作答，於本試題紙上作答者，不予計分。

* You must show ALL your work to obtain full credit.

* You can make necessary assumption if needed to solve the problem.

- (15 %) Consider the least squares regression line $\hat{y}_i = \beta_0 + \beta_1 x_i$, please use the least squares method to derive the point estimators of β_0 and β_1 respectively (Hint: You need to minimize the sum of squared residuals).
- (18 %) A random sample $\{X_1, X_2, X_3\}$ of size 3 is drawn from a population with mean μ and variance σ^2 . (So X_1, X_2, X_3 are i.i.d.) Let $T_a = \frac{1}{4}(X_1 + bX_2 + X_3)$
 - (a - 5 %) For what value of "b" is T_a an unbiased estimator of the population mean μ .
 - (b - 5 %) Compute the variance of T_a . (Assume "b" is unknown)
 - (c - 8 %) Recall that the mean square error is $E[(T_a - \mu)^2]$. Find the value of "b" which gives the best estimator in the sense of minimizing this mean square error.
- (25 %) The president of a University is concerned about how much time students spent on homework. Last year, the average time students spent on homework was 21 hours per week. This year, a random sample of 36 students indicates that the average time spent is 22.2 hours per week. Assume that the population standard deviation is 2.4 hours.
 - (a - 4 %) What assumptions are required for this test to be valid?
 - (b - 3 %) Is this a z or a t test? Please explain your answer.
 - (c - 10 %) Perform the 5 steps hypothesis test to determine whether there is any evidence to suggest that students spent more time on homework this year than last year. Please use a significance level of 1%.
 - (d - 4 %) Construct a 99% lower confidence bound for the population mean. No interpretation is required.
 - (e - 4 %) Explain why parts c) and d) are consistent with each other.
- (30 %) The ownership of automobile has an important effect on the traffic volume on the road. In a study conducted in three countries, average ownership of vehicles per household were measured. The results are summarized in the following table:

Country	N	Mean	StDev
America	48	3.7	2.5
Canada	100	3.1	1.8
France	55	2.9	1.8
Analysis of Variance			
Source	SS	MS	F-Value
Country	16	8 xxx	0.138
Error	800	xxx	

- (a - 5 %) Is it reasonable to use the assumption of equal standard deviation when analyzing these data? Give a reason for your answer.
- (b - 5 %) Find the value of MSE. What is the standard deviation?
- (c - 2 %) What are the numerator and denominator degrees of freedom for the F statistic?
- (d - 3 %) Find the value of the F statistic.
- (e - 10 %) Carry out a significance test to compare the mean for the three countries at a significance level 0.025. Please follow the five step procedure and make a conclusion in context.
- (f - 5 %) Should a multiple comparison test be performed in this situation? Please explain your answer in one sentence.
5. (12 %) Define and explain the usage of the statistics terms below (Do NOT Just show the formula):
- (a - 4 %) Central Limit Theorem
- (b - 4 %) P-value
- (c - 4 %) Bayes' theorem

Table of Z-distribution

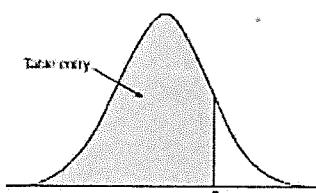

Table entry for z is the area under the standard normal curve to the left of z .

z	.00	.01	.02	.03	.04	.05	.06	.07	.08	.09

Table of critical F values for $\alpha = 0.025$.

The degrees of freedom of the numerator are listed horizontally.
 The degrees of freedom of the denominator are listed vertically.
 This table is used for one-tailed F tests and ANOVA F tests.

df for the denominator	df for the numerator											
	1	2	3	4	5	6	7	8	9	10	11	12
