

系所組別： 交通管理科學系丙組

考試科目： 工程力學

考試日期： 0308，節次： 1

※ 考生請注意：本試題 可 不可 使用計算機

1. (20%) Determine the range of values of P for which both cables AC and BC remain in tension.
2. (20%) Determine the force in members BD and CD of the truss shown.
3. (20%) Draw the shear and bending-moment diagrams for the loading shown.
4. (20%) A ball rebounds as shown after striking a vertical wall with a velocity v_0 of magnitude $v_0 = 5$ m/s. Knowing that the coefficient of restitution $e = 0.75$ between the ball and the wall, determine the velocity and the distance x when the ball hits the ground.
5. (20%) A uniform slender rod of length $L = 1$ m and mass $m = 1$ kg hangs freely from a hinge at A . If a force $P = 4$ N is applied at B horizontally to the right, determine (a) the angular acceleration of the rod, (b) the components of the reaction at A .
