

※ 考生請注意：本試題可使用計算機。請於答案卷(卡)作答，於本試題紙上作答者，不予計分。

1. Figure 1 is the Carnot cycle process. Please indicate the title of each process. (such as: which process is reversible isothermal compression?) (20%)

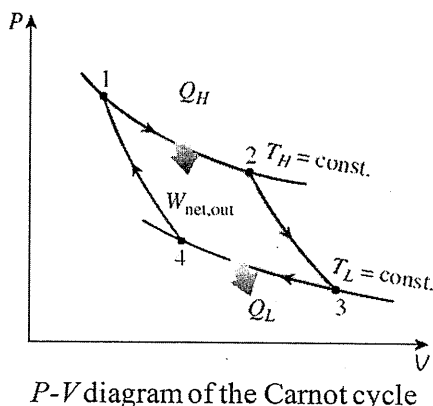

Fig. 1

Fig. 2

2. As Fig. 2, air in a large building is kept warm by heating it with steam in a heat exchanger. Saturated water vapor enters this unit at 45°C at a rate 2 kg/s and leaves as saturated liquid at 40°C. Air at 1 atm pressure enters the unit at 20°C and leaves at 35°C about the same pressure. Determine the rate of entropy generation ( $s_{gen}$ ) associated with this process. The property of air is  $c_p = 1.005 \text{ kJ/kg}\cdot\text{°C}$  (25%)

3. As Fig. 3, a piston-cylinder device initially contains 50 L of liquid water at 60°C and 100 kPa. Heat is transferred to the water at **constant pressure** until the final temperature at 280°C. (a) What is the mass of the water? (b) What the final volume? (c) What the final enthalpy? (d) Determine the water heated energy ( $Q$ ) from initial state to final state, and (e) Show the process on a P-v diagram with respect to saturation lines. (30%)

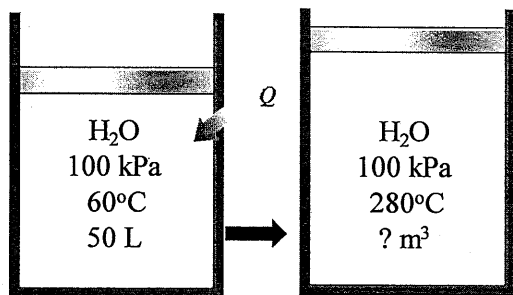

Fig. 3

Fig. 4

4 As Fig. 4, R-134a is to be cooled by water in a condenser. The R-134a enters the condenser with a mass flow rate at 2 kg/s at 1 MPa and 150°C and leaves at 40°C. The cooling water enters at 10 kPa and 30°C and leaves to produce **saturated liquid-vapor mixture state** at 10 kPa and quality  $x = 0.05$ . The heat lost is 100 kW. Neglect any pressure drops, determine (a) the mass flow rate of the cooling water required and (b) the heat transfer rate from the R-134a to water. (25%)
