- As Fig. 1, 1-kg of water at 1 MPa fill a weighted piston-cylinder device whose volume is 0.1 m^3 . The water is then heated at constant pressure until the temperature reaches 300°C . Determine the resulting change in the water's total entropy and show the process on a T - s diagram with respect to saturation lines. (30%)
- As Fig. 2, a heat engine receives heat from a heat source at 1000°C and has a thermal efficiency of 50%. The heat engine does maximum work equal to 400 kJ. Determine the heat supplied to the heat engine by the heat source, the heat rejected to the heat sink, and the temperature of the heat sink. (20%)
- As Fig. 3, a 0.12 m^3 rigid tank is filled with saturated liquid water at 200°C . A valve at the bottom of the tank is opened, and liquid is withdrawn from the tank. Heat is transferred to the water such that the temperature in the tank remains constant. Determine the amount of heat that must be transferred by the time one-half of the total mass has been withdrawn. (30%)
- A piston-cylinder device initially contains 0.01 m^3 of liquid water at 100°C and 920 kPa. Heat is transferred to the water at constant pressure until the entire liquid is vaporized. (a) What is the mass of the water? (b) What is the final temperature? (c) Determine the total enthalpy change. (d) Show the process on a T - v diagram with respect to saturation lines. (20%)
