

PART I：工程力學

1. A 10-N collar slides down from A with zero initial speed along the smooth rod. During the motion, a force $\mathbf{F} = 50xi + 30yj + 10zk$ N is applied to the collar as shown in figure 1, where x , y , and z are in meters. Find the collar's speed when it reaches B. (20%)

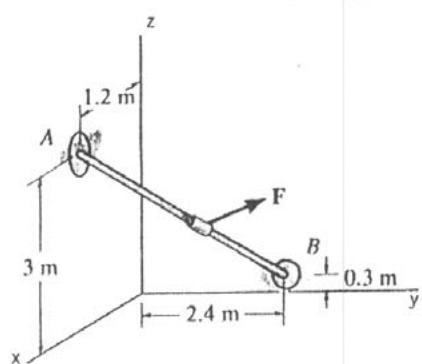

Figure 1

2. Consider a car driving down a slope represented by the rolling disk down a slope model as shown in figure 2. Explain how can a moving car be stopped on the slope by stepping on the car break? (20%)

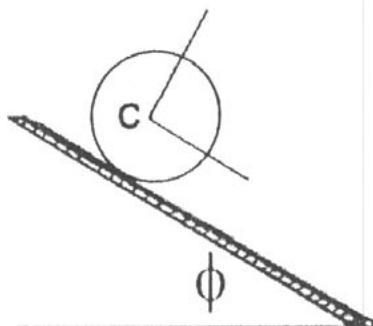

Figure 2

PART II：電子電路

- 3) 下圖一中之菱形元件為一相依電壓源，其兩端電壓為 $30I_x$ ，求 $4A$ 電流源的功率為何？(20%)
- 4) 下圖二的曾納二極體其 $V_Z = 5V$ 而為 R_L 一個可在 5Ω 跟 100Ω 之間隨意調整的可變電阻，若 R_L 兩端電壓要保持為 V_Z ，則 R 的範圍必須是多少？(10%) 另外，二極體的額定功率又必須是多少？(10%)
- 5) 下圖三的三極體，其基極跟集極之間的開啟電壓以及射極跟集極之間的飽和電壓皆為 $0.5V$ ，試求這個三極體的 I_{BO} 及 V_{CEQ} 各為多少(10%)；另外， V_S 為多少的時候，三極體會截止工作(5%)？而 V_S 為多少的時候，三極體會飽和(5%)？
