

一. Data Structure (50%)

1. (12%) Answer the following questions:

- Describe the characteristics of AVL tree.
- What is the complexity of time to delete a key from an AVL tree with  $N$  keys?
- Given a data set of  $N$  items, compare the number of comparisons for searching a single item when the data are stored in sorted array, link list and AVL-tree, respectively.

2. (15%) Answer the following questions

- How many comparisons are needed at least for sorting 5 elements by any comparison-based algorithm? Explain why.
- Give the average time complexity of QUICKSORT, HEAPSORT and 2-WAY MERGE SORT, respectively.
- Please describe under what conditions you will use each of the sorting methods in (b) such that you can obtain best efficiency.

3. (15%)

(a) Give the definition of B-tree of order  $m$ .

(b) The following is a B-tree of order 3. Please plot the tree again after deleting key "20".

How many disk accesses are needed?

4. (8%) Give an  $O(|V|)$ -time algorithm for determining whether or not a given undirected graph  $G = (V, E)$  contains a cycle. Explain why your algorithm's running time is independent of  $|E|$ .

二. Algorithms (50%)

1. Consider the problem of evaluating a polynomial at a point. Given  $n$  coefficients  $a_0, a_1, \dots, a_{n-1}$  and a real number  $x$ , describe a  $\theta(n)$ -time

algorithm to compute  $\sum_{i=0}^{n-1} a_i x^i$ . (10%)

2. (a) Explain why the statement, "The running time of algorithm  $A$  is at least  $O(n^2)$ ," is content-free. (5%)

(b) Is  $2^{n+1} = O(2^n)$ ? Is  $2^{2n} = O(2^n)$ ? (5%)

3. What is the largest  $k$  such that if you can multiply  $3 \times 3$  matrices using  $k$  multiplications (not assuming commutativity of multiplication), then you can multiply  $n \times n$  matrices in time  $o(n^{\log_7})$ ? (20%)

4. Let  $(u, v)$  be a minimum-weight edge in a graph  $G$ . Does  $(u, v)$  belong to some minimum spanning tree of  $G$ ? (10%)
